

distribution
of electronic
components

Company Profile

Inside you
can find:

 **Product
Line**

That we not only
sell components,
**we also
understand them**

Our offer
according to the
application

Partners who put their
trust in us

Our **contact
details**

We have been part of the European distribution market for electronic components for more than 30 years

And that is no coincidence. A small Central European company has become a global supplier of solutions for customers in more than 100 countries around the world. Your company can also benefit from the experience we have gained.

Whether you are in the development phase of your product, in the process of purchasing components, testing, production itself, or you are just dreaming about your product and drawing the idea on a flipchart. We stand by you.

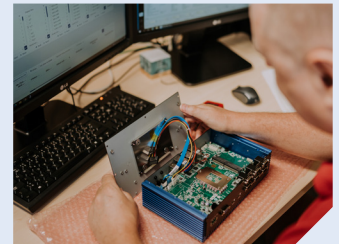

Partners put their trust in us

We not only sell components, **we also understand them**

Planning & Design

The time and the beginning when you decide on every detail and work on a systematic approach towards your goal. We stood at the starting line. We know how it feels. We offer our business and technical expertise to streamline your journey, save your time and accomplish your goals.

Development

The inspiration of engineers while creating the product's entire journey is magical. Rely on our resources, data, information, or equipment which can help you finalize your dream and turn it into reality.

Purchasing

Focus on the creative part of your project and let our technical and business experts suggest you suitable components or get you in touch with the right supplier. Our partners offer reliable information, quality products, and services.

Production

Leave all your worries to us while guiding the processes required to get new products from the factory line to a market. The product quality, components origin guarantee, delivery on time, and individual approach are our must.

**FAST
SOLUTIONS**

**SAFE & QUICK
TIME DELIVERY**

**TECHNOLOGICAL
TRENDS**

**YOU CAN
TRUST US**

**WE ARE A RELIABLE
PARTNER**

Transportation

We cooperate with leading producers of electronic components in the automotive, railway or any other industrial transport field that requires greater demands for reliability, operational safety, and durability.

Smart City

A smart city is an area that uses electronic methods and sensors to collect data. They are then used to manage traffic and transportation systems, power plants, utilities, water supply networks, waste, crime detection and information systems.

Smart Building

The basic requirements for a smart building are security and optimised energy consumption. An intelligent building must provide users and operators with an environment that is optimised for comfort and energy efficiency but must adapt to their current requirements.

Automation and Embedded Systems

Today, embedded systems can run sophisticated software for machine control in production, visualisation of the production process, control of autonomous vehicles for material transport as well as control of the operation of the beverage machine.

Consumer Electronics

The user expects that the battery will last as long as possible, that the button will pop up immediately, that the micro-processor won't get stuck, that the remote control won't get lost in the apartment, that there will be as few cables sticking out of the device as possible.

Energy

The power supply is probably the most important part of every application. Special power supplies with extended operating temperature range, certified for harsh environments.

Retail

Products to support the operation of stores, supermarkets, logistics, and warehouse management.

Industrial

Everything related to the industrial production of electronics. Components are adapted to the harsh environment.

Medical

We offer a complex electronic components solution to your Medical devices development and production.

5G

We have components which will provide faster data transfer and more efficient connection.
